With August being the height of the season, Chile’s lemon exporters usually wind down their activities in September. This year, however, it looks like the season came a bit early, sending 21.7m kilograms in July - more than twice the amount that was exported in 2018.

August is already seeing a decrease in volume, but not too much lower than the same time period the previous season.

### Non-Organic Lemon Volumes From Chile

In prices, the differences between the two seasons are more pronounced. In July - perhaps reflecting volumes - the pricing was almost half of what we were seeing the previous year.

In August, where volumes were already lower than the previous year, the gap in pricing between last year and this year further increased, setting the highest price we have seen in the last four years against the lowest.
