

PRESS RELEASE

Food Logistics, the magazine dedicated to the global food supply chain, has named Xsense® by BT9 to its 2019 FL100+ Top Software and Technology Providers.

This list is a guide of software and technology providers whose products and services are crucial for companies in the global food and beverage supply chain.

"Whether you're using sensors to monitor critical temperatures for perishables or a WMS to manage inventory flows in your warehouse, software and technology are playing a vital role in the food and beverage industry," notes John R. Yuva, editor for Food Logistics. "Our FL100+ recipients help drive supply chain compliance and regulatory changes that benefit everyone from the farmer to the food processor to the consumer."

"Xsense® is a constantly improving our system, to provide advanced technology at fair prices. Our goal is to secure perishables supply chains by making temperature monitoring available for even small enterprises," says the company's CEO Rob Williams.

2019 FL100+ Top Software and Technology Providers are published in the November/December 2019 edition of Food Logistics, and online at www.foodlogistics.com.

About Xsense

[Xsense®](http://www.xsense.com) is an IoT solution for monitoring of ambient conditions (like temperature and relative humidity) of highly-perishable food and pharmaceutical products by BT9 Ltd. Hundreds of food producers worldwide use Xsense® for shipment and facility monitoring. This Israel-based company provides advanced monitoring technologies at fair costs, empowering hundreds of companies around the globe to reduce waste and optimize their cold supply chains.
