*In this installment of the '[In Charts](#)' series, Cristian Crespo of [Agronometrics](#) illustrates how the U.S. market is evolving. Each week the series looks at a different horticultural commodity, focusing on a specific origin or topic visualizing the market factors that are driving change.*

This week we're going to take a look at the volumes and average prices of clementines in the U.S. market.

It appears that the heavy supplies of clementines over the last few weeks have not had a big impact on prices, amid a firm and high demand for this fruit that's likely driven in part by the Covid-19 pandemic. In fact, last week the Chilean Citrus Committee said that its clementines were meeting with "[strong market demand](#)".

In week 23, the average price of clementines in the U.S. was $2.45 per kilo, which is 10% higher year-on-year.

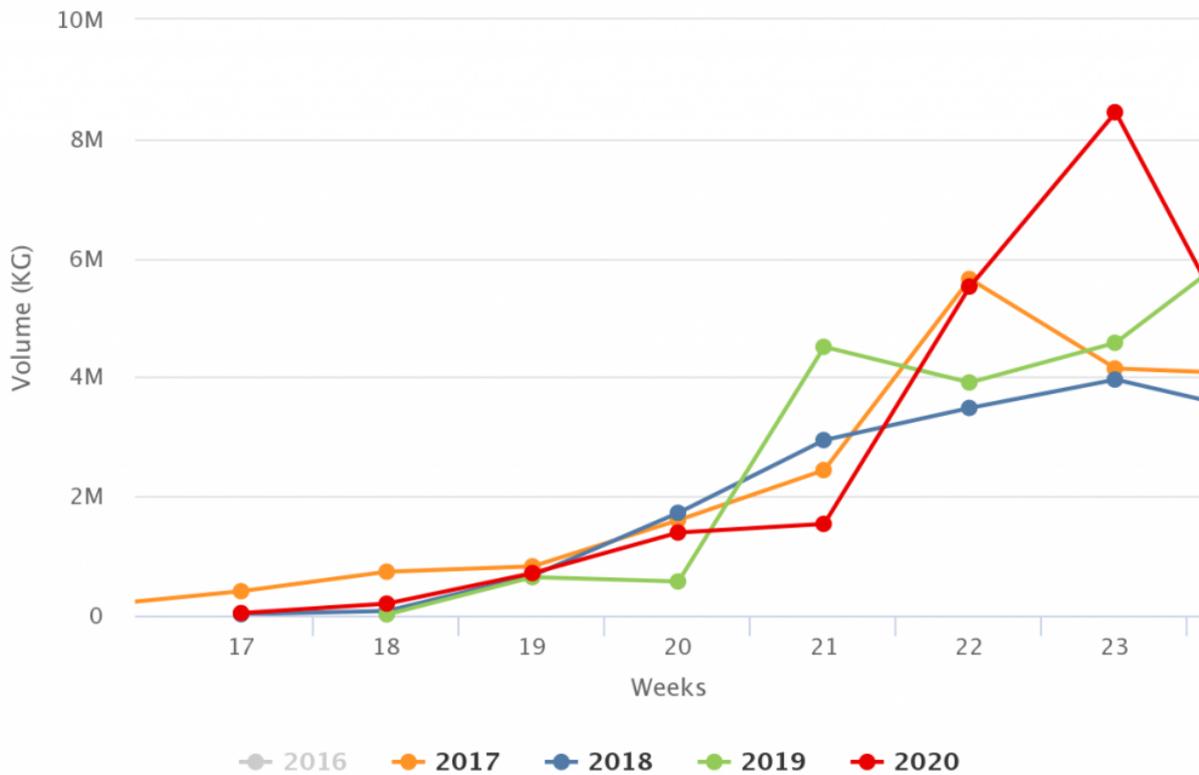

Prices of clementines in the U.S. market

This price increase has come despite a volumes of 8.4m metric tons (MT) - a massive 84% up on last year and the highest in the last five years by the same date.

Chile was by far the main supplier, providing 95% of the volumes.
