

In this installment of the '[In Charts](#)' series, Cristian Crespo of [Agronometrics](#) illustrates how the U.S. market is evolving. Each week the series looks at a different horticultural commodity, focusing on a specific origin or topic visualizing the market factors that are driving change.

This week we're going to provide an update on berry pricing in the U.S. spot market, looking at the average values of blueberries, raspberries, strawberries and blackberries.

Blueberries

Kicking off with blueberries, we can see in the chart below that this category has seen fairly similar pricing to the previous year, with small fluctuations from one week to another.

In week 25, the average price was up 10% year-on-year at US\$5.59. The supplying regions are California, Mexico, Georgia, New Jersey, and North Carolina.

Raspberries

In the case of raspberries, we can see that prices have been trending significantly downward in recent weeks, in contrast to previous years.

In week 25 the average price was US\$4.70 per kilo, a while 42% lower year-on-year. The supplying regions are California and Mexico.

Strawberries

Prices of strawberries over recent weeks have been generally lower than 2019, but they have shown recovery over the last two weeks.

Prices in week 25 were US\$2.52 per kilo on average, which is 15% lower than last year. California and North Carolina are the only supplying regions.

Blackberries

Like raspberries and strawberries, blackberries are also seeing lower pricing year-on-year, despite having experienced a sharp recovery over the last five weeks.

In the chart below you can see that prices as of week 25 were registered at US\$5.44, putting them 32% lower year-on-year. The supplying regions are Mexico, Georgia, California and North Carolina.
