

In this installment of the '[Agronometrics In Charts](#)' series, Colin Fain illustrates how the U.S. market is evolving. Each week the series looks at a different horticultural commodity, focusing on a specific origin or topic visualizing the market factors that are driving change.

A record-volume summer kept apple prices down over much of the year, though autumn has seen the markets swing the other way.

In week 39, the market surpassed its price point year-on-year, and prices jumped past the previous record-holder (2017) in week 44.

As a result, the spot market pricing reported in week 48 is the highest for the week on record.

Apples, Non-Organic | Historic Price (Cartons Tray Pack)

The resurgence of the market is driven by noticeably lower volumes starting in week 39 (w/e 27 Sep). Main origins like Washington, New England and North Carolina are reporting lower volumes than last year.
