

Valeria Concha studies shortly the state of the clementine market. Each week the series looks at a different horticultural commodity, focusing on a specific origin or topic visualizing the market factors that are driving change.

Currently, the supply of clementines in the US market is mainly made up of fruit from Chile, with small volumes from other origins such as Peru.

Coming to the end of the supply of clementines from the southern hemisphere, the accumulated volume from Chile reaches about 28,000 tons, 70% of the supply between weeks 18 and 35. While Peru contributed 14% of the supply of clementines, South Africa with 10% and Uruguay with 6%.

According to the [Citrus Committee of Chile](#), the 2022 Chilean Clementines season has ended, the United States being the main destination. As indicated, of the total exported, 98.6% were destined to the United States, of which 73% were allocated to the East Coast, and the remaining (27%), to the West Coast.

In turn, shipments accumulated until week 32 presented a 39% decrease, compared to the same week of the previous season. The main factor that influenced this decrease was the severe drought that the country faced during 2021, which has greatly affected the Coquimbo region, a region that concentrates the largest production of clementines in the country.
